Product Description

Color Night Vision IP PTZ Camera Core Technical Features:

1. Adopting the latest Sony CMOS Sensor(STARVIS Series),IMX 307 and IMX 335, with much higher sensibility and compatibility, brings the wonderful day & night image.
2. Directly using the light intensity data of the sensor to achieve high-precision brightness value acquisition.
3. According to the imaging brightness requirement of the sensor, adjusting the LED's power consumption dynamically. If the environment brightness is intense, LEDs will auto-turn off. And under the full power condition when enter to the near zero light environment. The camera zooms far,LED light will be lighter ; If the camera zooms close, the power consumption will be lower . This camera solved the problems like too much exposure in near and less exposure in far when compare with the traditional PTZ Cameras.
4. The high-brightness LED light with 3000K color temperature, combined with the latest ISP color tuning technology, can also display perfect color night vision images without glare yellow light. The warm light ball is perfect for day and night full color surveillance images, the picture is exquisite, and the face can be clearly seen.

Scenario: Various low-light and no-light outdoor environments, with a monitoring distance of 100 meters in a black and dull environment.
